AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions of claims in the application:

Listing of Claims:

- 1. (Previously amended) A system facilitating rule composition comprising:
- a processor communicatively coupled to a computer readable medium having stored thereon a rule composer that in response to a user input facilitates at least one of creation and modification of a rule, the rule composer further receiving information associated with the at least one of creation and modification of the rule based, at least in part, upon natural language inline editing; and,
 - a display component that displays hierarchical information associated with the rule.
- 2. (Original) The system of claim 1, further comprising an input component that facilitates receipt of information associated with the at least one of creation and modification of the rule.
- 3. (Original) The system of claim 1, the rule being a business rule.
- 4. (Original) The system of claim 1, the rule being based, at least in part, upon a parameterized format string definition.
- 5. (Original) The system of claim 1, the rule being based, at least in part, upon a composable vocabulary definition.
- 6. (Original) The system of claim 1, the display component facilitating a user interface comprising a first splitting panel and a second splitting panel.
- 7. (Original) The system of claim 6, wherein the first splitting panel facilitates building a condition associated with the rule.

- 8. (Original) The system of claim 6, wherein the second splitting panel facilitates building an action associated with the rule.
- 9. (Original) The system of claim 1, wherein editing focus can be transferred from a node associated with the node visually accentuated to represent a parent-child relationship.
- 10. (Original) The system of claim 1, the display component facilitating a user interface comprising a property window that displays a property of a node of the hierarchical information.
- 11. (Original) The system of claim 1, the rule comprising a condition.
- 12. (Original) The system of claim 11, the condition comprising at least one of a logical and, a logical not and a logical or.
- 13. (Original) The system of claim 1, the display component facilitating display of a context menu associated with at least one of an action and a condition associated with the rule.
- 14. (Original) The system of claim 1, the display component facilitating a user interface comprising at least one of adjust splitting panels, a drag and drop operation, and, a clipboard operation.
- 15. (Original) The system of claim 1, the rule composer comprising a rule editor and a policy explorer.
- 16. (Original) The system of claim 1, the rule composer facilitating editing of a parameter having a range.
- 17. (Original) The system of claim 1, the rule composer facilitating editing of an unconstrained parameter.

- 18. (Original) The system of claim 1, the rule composer facilitating editing of a parameter having a value in a set of values.
- 19. (Original) The system of claim 1, the rule composer facilitating type compatibility checking.
- 20. (Original) The system of claim 1, the rule composer facilitating error checking and providing error information to the display component if an error is found.
- 21. (Original) The system of claim 1 embodied in a computer readable medium.
- 22. (Original) A method facilitating rule composition comprising: receiving a request to modify and/or create a rule; and, creating and/or modifying the rule based, at least in part, upon natural language inline editing.
- 23. (Previously amended) A data packet transmitted between two or more computer components and stored on a computer readable medium that facilitates rule composition, the data packet comprising:

information associated with a rule, the rule modified and/or created based, at least in part, upon natural language inline editing.

- 24. (Original) A computer readable medium storing computer executable component of a system facilitating rule composition comprising:
- a rule composer that in response to a user input facilitates at least one of creation and modification of a rule, the rule composer further receiving information associated with the at least one of creation and modification of the rule based, at least in part, upon natural language inline editing; and,
 - a display component that displays hierarchical information associated with the rule.

25. (Original) A system facilitating rule composition comprising:

means for receiving a user input;

means for composing a rule, the means for composing receiving information associated with creation and/or modification of the rule based, at least in part, upon natural language inline editing; and,

means for displaying hierarchical information associated with the rule.

26. (Previously amended) A user interface facilitating natural language inline editing for rule composition comprising:

a processor communicatively coupled to a computer readable medium having stored thereon computer readable instructions for generating a policy explorer region that displays hierarchical information associated with a policy, the policy comprising at least one rule; and,

a rule editor region that display hierarchical information associate with the rule, the rule modified and/or created based, at least in part, upon natural language inline editing.

- 27. (Original) The user interface of claim 26, the rule editor region comprising a condition region that displays information associated with a condition associated with the rule.
- 28. (Original) The user interface of claim 26, the rule editor region comprising an action region that displays information associated with an action associated with the rule.
- 29. (Original) The user interface of claim 26, further comprising a property condition region that displays information associated with a property of a node of the hierarchical information associated with the policy.

30. (New) An e-business computing system facilitating rule composition comprising: an e-business device having a processor communicatively coupled to a computer readable medium having stored thereon a rule composer that at least one of creates and modifies an e-business rule wherein the rule composer receives information associated with the at least one of creation and modification of the e-business rule in a natural language format related to inline editing of at least one logical e-business rule expression, said natural language format accepting composable vocabulary definitions; and,

a display component that displays hierarchical information associated with the e-business rule;

a drag and drop compatible user interface comprising a first splitting panel related to building a condition associated with the e-business rule and a second splitting panel related to building an action associated with the e-business rule, wherein navigation across the displayed hierarchical information structure includes selection of one or more hierarchical rule nodes and wherein drag and drop functionality facilitates modification and creation of e-business rules.
